# UniMac

## Dryers

**A**t UniMac, washers and dryers are considered more than just laundry equipment. They are key players in the success of on-premise laundry facilities and as such, must continuously achieve high levels of efficiency, quality and durability. UniMac has always maintained a standard of excellence in laundry equipment manufacturing that is recognized around the world. With over 50 years of engineering expertise you can be assured that you are getting the best washers and dryers on the market that will meet your needs now and in the future.

### Extra Large 7.0 cu. ft. Capacity

UniMac's extra large capacity drying cylinder needs very little space yet easily handles sizeable wash loads. Smooth baffles tumble loads freely for maximum dry air movement.

## Stack Washer/Dryers

### Floor Space

By stacking the dryer on top of the washer, you gain a large amount of floor space. Dream of the possibilities for how you could use the extra space. These units are the **ultimate space saver**. You can place laundry equipment in places that were never before possible.

The utility connections are identical to those used with residential style equipment. There is no extra work or floor space required.

### Large Door Opening

For ease in loading and unloading, UniMac designed its dryer with a 2.06 sq. ft. door opening, one of the **largest in the industry**.

### Front Serviceability

UniMac's two piece front panel increases ease of service which can **save time** and expense. Motor, blower, heating element, gas valve and thermostats can be serviced through lower panel without disconnecting door switch.

## Frontload Washers

### Utility Cost Savings

Utility costs are a big part of your laundry dollar. UniMac can help you reduce your costs with our energy efficient frontload washers.

The frontload washer is **ENERGY STAR® qualified** and excels in energy efficiency. The listing was earned by our washer's low usage of hot water,

low motor energy consumption and high moisture removal. The washer's **super high spin speed** reduces drying time and energy costs.

You could **save hundreds of dollars** per year on electricity, gas, water and sewer fees. These savings are due to **less hot water**, less overall water consumption and shorter drying times.

### Saves Time

If you believe **time is money**, then you will be excited to experience how UniMac's frontload washers cut time from every wash and dry cycle. The super high **spin speed of 1000 rpm** removes much more water than topload washers. This greatly **reduces the drying time**. In fact, our tests show as much as 30%!

### Front Controls and Supply Dispenser

The unique front control design allows for **convenient storage** on top or it can easily fit under a counter.

Add your detergent, bleach or softener with the automatic front mount supply dispenser, **walk away** and the washer will take care of the rest.

### Liquid Supply Injector

Some installations may require a connection to an automated liquid supply system. There are two supply signals and two injection ports included within the washer.

### Heavy Duty See-through Door

UniMac has constructed a heavy duty door with 10" stainless steel hinges that are capable of **swinging 180°**, allowing for easy loading and unloading. The see-through door allows users to view the reversing wash action that gets linens their cleanest.

## Topload Washers

### Rugged Suspension System

UniMac incorporates a liquid-filled balance ring at the top of the tub along with a 7 point suspension system to handle **bulky loads with ease**.

### Front Serviceability

UniMac engineered its washer to easily handle large loads while occupying minimal floor space. Our **100% front serviceable** design eliminates the need for extra floor space around the unit making it ideal for small or large laundry rooms. Simple removal of front panel or control hood provides easy access to all major components from installed position which can save you time and money.

### Durable Stainless Steel Tub

To keep linens looking their best longer – UniMac's washer features a stainless steel tub that will actually become smoother with each use, so it won't pill, fray or snag fabric. In fact, stainless steel won't corrode, chip, crack or pit under normal use and it is extremely rust resistant and that's why we provide a **lifetime warranty**.

### Agitator

For superior washability, UniMac's wavy vane agitator offers a 210° agitation stroke that delivers maximum side-to-side, top-to-bottom washing action to **get linens their cleanest**.

# Specifications
